

Battery Cleaner

Cleans and protects
batteries

Protect your investment in the batteries that keep your business running by adding them to your preventive maintenance program. **BATTERY CLEANER** is a one step neutralizing cleaner with an acid-alkali indicator that changes from yellow to red as acid is neutralized. Removes corrosive build-up on battery terminal posts, cables and clamps. The powerful heavy duty foam clings to surfaces to provide extended contact time. **BATTERY CLEANER** helps increase power output and extend battery life by reducing current leakage caused by dirt and corrosion deposits. Leaves a short-term residual protective film on cleaned surfaces. Water soluble formula can be wiped or flushed off with water. After cleaning and acid neutralizing apply a coat of Omega's **BATTERY GUARD**. This clear sealer and protectant provides long term protection against corrosion and oxidation on terminals, clamps, brackets, and cables.

Directions: Spray on entire battery surface including cables, clamps, terminals, brackets and housings. **BATTERY CLEANER** will spray out light yellow and turn red in the presence of acid. Allow foam to work, the flush off with water. Follow with a second application. If spray turns red, all acid is not yet neutralized, allow foam to sit again, then repeat. When foam remains yellow allow product to dry and form a residual short-term protective coating.

Health	1
Flammability	0
Reactivity	0
Protection	A

Areas of Use:

- *fleet cars
- *trucks & buses
- *taxi fleets
- *forklifts
- *golf carts
- *industrial battery backup systems
- *postal equipment
- *marine equipment
- *aircraft and more

Appearance and odor.....	Orange liquid, ammonia odor
Specific Gravity.....	Concentrate - 1.046
Propellant.....	Liquefied Petroleum Gas
VOC.....	8%
NFPA Fire Rating.....	Non-flammable Spray
