

Battery Guard

Protective Coating

BATTERY GUARD is a super tough long term corrosion preventative coating that protects terminal connections and cable ends, eliminates power leakage, plus provides an airtight waterproof seal. Sprays as a wax-like coating that cures to a flexible seal that will not melt, crack or peel in heat or cold. Will not rinse off with water or detergent based cleaners. Once treated with **BATTERY GUARD** the connections will remain protected unless coating seal has been broken or battery has been exchange. Unique red color simplifies identification of connections that have already been treated. Tested safe and effective for battery operated vehicles. Perfect for treating vehicles being prepared for long term storage.

Directions: Shake well. Use Omega's **BATTERY CLEANER-A** before use. Coating is most effective if surfaces are clean, dry and free of corrosive buildup. Spray a light even coat covering entire post, wing nut, connector, cable and surface. Allow time to dry and apply a final light coat for added protection. The coating will cure completely in an hour and set up to a tack free film impervious to moisture and acid.

Areas of Use:

- *battery terminals
- *cables
- *cable ends
- *wing nuts
- *terminal posts
- *hold downs
- *relay boxes
- *power connections
- *golf courses
- *municipalities
- *vehicle maintenance
- *equipment maintenance

Health	1
Flammability	3
Reactivity	0
Protection	B

Appearance and odor.....	Dark red liquid, solvent odor
Specific Gravity.....	Concentrate - 0.793
Propellant.....	Liquefied Petroleum Gas
VOC.....	~75%
NFPA Fire Rating.....	Extremely -Flammable Spray
