

COPPER SOLDER

Copper Pipe Glue

Copper Solder is a non toxic, tasteless, odorless, non-flammable, and certified safe for potable water by NSF/ANSI-61. **Copper Solder** is a one-part, scientifically formulated, acrylic polymer anaerobic that requires up to 80% less time to bond rigid copper pipes to fitting than traditional hot soldering (sweating), and eliminates the risk of fire and burns. Once bonded **Copper Solder** is as strong and permanent as hot sweating copper pipe. **Copper Solder** works when the pipes have moisture in them. Pipes with moisture cannot be hot sweated. It is ideal for all new-build and repair plumbing applications, and all rigid copper plumbing in extreme risk environments like ammunition manufacturers and when flammable and combustible gases are present. **Copper Solder** eliminates the need for fire watches required when an open flame is used to install or repair copper plumbing. 1000 psi.

Directions: **Copper Solder** bonds in three easy steps. (1) Sand pipe & fitting with 60 grit sandcloth. (2) Apply **Copper Solder**. (3) Insert the pipe into the connector and rotate 360 degrees. No mixing, no heating, and no waste. The bond is made in 10 seconds, and in 7 minutes you can do a pressure test or turn the water back on.

Uses:

- *plumbing shops
- *building maintenance
- *HVAC

Health	1
Flammability	1
Reactivity	1
Protection	H

Appearance and odor.....	Red liquid with slightly sweet, characteristic odor.
Specific Gravity.....	N/A
VOC.....	N/A
NFPA Fire Rating.....	Non-Flammable
