

Ice Melter

Ice melter
Safe on asphalt and concrete

This product starts to work instantly, 2 to 5 times faster than rock salt and blended ice melters, generating heat on contact even in sub-zero temperatures down to -25°F. It is great for sidewalks, driveways, and parking areas and does not leave any white residue. It is gentle to lawns and concrete when used as directed, and will not burn dog paws like rock salt can. Independent testing has shown that **ICE MELTER** contributes less to concrete scaling than other commonly used de-icers. **ICE MELTER** keeps working even after other ice melters quit, and a little goes a long way, use much less than rock salt.

Directions: Apply evenly and sparingly, using approximately 2 to 4 ounces per square yard before, during or after a freeze. De-icers of any kind tend not to be effective when snowfall reaches more than 2 inches. Plow or shovel snow, then apply **ICE MELTER** to melt the ice or hard packed snow that remains.

Areas of Use:

- *transit authorities
- *cities and counties
- *walkways
- *parking lots
- *streets
- *road and streets departments
- *alleyways
- *stairs
- *highways
- *sidewalks
- *driveways
