

Oil Pads & Non-selective pads

absorbent pads

OIL PADS are oil-selective absorbent pads for soaking-up oil spills of any size. **NON-SELECTIVE PADS** are designed to soak up any type of liquid that may be spilled, or that may drip from filling machines, shop equipment, or any other source of liquids. Both types of pads are great to have in case of a spill so that the floor area stays cleaner and the spill is contained in a smaller area, without flowing into drains, under heavy equipment, or other hard to clean areas.

Directions: Lay **OIL PADS** or **NON-SELECTIVE PADS** on top of spill or put onto ground or other surface that is susceptible to leaks, so that the liquid can be soaked up as it is deposited.

Areas of Use:

- *warehouses *industrial facilities *vehicle maintenance shops *cities and counties
- *boiler rooms *engine rooms *engineering departments *packing plants

Health	0
Flammability	0
Reactivity	0
Protection	N/A
