

Rust X

Rust Converter and Metal Primer

RUST X chemically neutralizes and leaves a tough, long term, rust preventative coating. Seals, protects and prolongs the life of ferrous metal. Once dry, the treated area will be darker in color and more uniform in appearance with a durable, protective finish that can be painted if desired. For maximum protection use Omega's **ARMOR COAT** stainless steel coating to coat new metal as well as areas that have been treated with **RUST X**. To avoid waste of unused product, our convenient aerosol packaging allows for storage of unused portion, no mess, no waste.

Directions: To ensure removal of grease and oil residue, clean with Omega's **MEGA POWER** degreaser prior to application. Note: Wearing chemical resistant gloves is recommended. For best results, the work piece and the can should be at room temperature (above 65°F). Surfaces must be clean, dry and free of grease, dirt and oil. Remove loose rust and paint with coarse sand paper or a wire brush. Before using, shake can until ball rattles freely for at least one minute. Holding the can 8-10 inches from the surface, spray a thin, even coating onto the rusted metal. Avoid over application, sagging and dripping. In some cases, a second application may be useful to insure full coverage and treatment. Wait until the first coat is completely dry before making a second application. A second application may not necessarily cause the surface to darken further. May be painted after the final application has cured for approximately 6 hours.

Areas of Use:

- *industrial equipment
- *playground equipment
- *awnings
- *bottling and packing equipment
- *docks and ships
- *guard rails
- *parking meter posts
- *valves and fittings

Health	1
Flammability	3
Reactivity	0
Protection	B

Appearance and odor.....	Clear brown, solvent odor
Specific Gravity.....	Concentrate - 0.86
Propellant.....	Hydrocarbon
% Volatile by Vol.....	71%
NFPA Fire Rating.....	Extremely-Flammable Spray
